

TAGME Continues to Move Forward

As the leader in certification for GME professionals since 2005, TAGME is acutely aware of and strives to keep pace with the evolution of graduate medical education. Along with changes to the certification process, TAGME has also modified its leadership structure. To ensure appropriate representation for all TAGME-certified coordinators, including those who will be globally certified, the leadership framework has been redesigned to reflect the ACGME Review Committee structure.

TAGME has established Certification Review Boards (CRB) which includes Hospital-based Specialties, Medical Specialties, Surgical Specialties, and Institutional Specialties. The Chair of each CRB is elected by the members-at-large of the specialties and sub-specialties that make up a particular CRB and is a voting member of the TAGME Board of Directors. The CRB is responsible for managing any specialty-specific certifications offered by the specialties under their board. Each specialty will be a “member” of a Certification Review Board.

- Hospital-based Specialties: Anesthesiology, Diagnostic Radiology, Emergency Medicine, Medical Genetics, Nuclear Medicine, Pathology, Preventive Medicine, Radiation Oncology, Transitional Year, as well as any sub-specialties associated with the specialty.
- Medical Specialties: Allergy and Immunology, Dermatology, Family Medicine, Internal Medicine, Neurology, Pediatrics, Physical Medicine & Rehabilitation, Psychiatry, as well as any sub-specialties associated with the specialty.
- Surgical Specialties: Colon & Rectal Surgery, Neurological Surgery, Obstetrics & Gynecology, Ophthalmology, Orthopaedic Surgery, Plastic Surgery, Surgery, Thoracic Surgery, Urology, as well as any sub-specialties associated with the specialty.
- Institutions: ACGME and AOA-accredited institutional GME.

Specialty Review Boards (SRB) will remain a key component of the Board of Directors. Three members will be selected by the specialty to represent their interests on the appropriate CRB. Each CRB will be responsible for maintaining the specialty-specific certification tools.
